### **DETAILED ACTION**

### **Information Disclosure Statement**

The information disclosure statement submitted on 1/7/2008 been considered by the Examiner and made of record in the application file.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-4, 9-10, 13-15, 17, 23-24, 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/0004827), in view of Smith et al (US Pub 2004/0181476).

Claims 5, 6, 11-12, 18-19, 21-22, 27, 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/0004827), in view of Smith et al (US Pub 2004/0181476), in further view of Randle et al (US Pub 2006/0248205).

Page 4

Application/Control Number: 10/721,372

Art Unit: 2143

Claims 7-8, 16, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/0004827), in view of Smith et al (US Pub 2004/0181476), in further view of Battou (US Pub 2002/0174207).

Claims 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/0004827), in view of Smith et al (US Pub 2004/0181476), and Randle et al (US Pub 2006/0248205) in further view of Battou (US Pub 2002/0174207).

Art Unit: 2143

Consider **Claim 1**, Ciscon et al discloses a carrier virtual network interface system (Ciscon et al, Pg 3, [0038], Pg 4, [0047]) to, allow an accessing telecommunication network managed by a network management system to indirectly manage the layer one resources dedicated to a Carrier virtual network, the layer one resources dedicated to the carrier virtual network being directly managed by the network management system of each of at least one dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014], Pg 4 [0047], Pg [0057]), the interface system comprising:

a dedicating network interpretation layer that interfaces With the network management system of a dedicating telecommunication network, the dedicating network interpretation layer converting network information regarding layer one 'resources dedicated to the carrier virtual network from the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) to messages for transmission to the network management System of the accessing telecommunication network and converting messages (Smith et al, Pg3, [0039]) from the network management; system of the accessing telecommunication network to network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) instructions for use, by the network management system of the dedicating telecommunication network;

an accessing network interpretation layer that interfaces with the network, management system of the accessing telecommunication network; the accessing

Art Unit: 2143

network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) converting messages (Smith et al, Pg3, [0039]) received from the network management system of the dedicating telecommunication network to network information for use by the network management system of the accessing telecommunication network and converting network instructions from the network management system of the accessing telecommunication network to messages (Smith et al, Pg3, [0039]) for transmission to the network management system of each of the at least one dedicating telecommunication networks (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 4 [0047], Pg [0057]); and a communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) that transmits messages (Smith et al, Pg3, [0039]) from the dedicating network interpretation layer to the dedicating network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0041], Pg 3, [0038], Pg 3, [0041]).

Ciscon et al fails to disclose the transmission and converting of messages in the network.

Nonetheless, Smith et al discloses the transmission and converting of messages in the network (Smith et al, Pg3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art art the time of the invention was made to allow the use of transmitting and converting of messages, taught by Smith et al, for the purpose of integrating the message feature to the network interface device/network management system, in the invention taught by

Art Unit: 2143

Ciscon et al, for the purpose of facilitating communication between nodes/systems about resource management of layer 1 devices.

Consider Claim 2, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of claim 1, further comprising: a second dedicated network interpretation layer that interfaces with the network management system of a second dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the second dedicated network interpretation layer converting network information regarding layer one resources dedicated to the carrier virtual network from the second dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) to messages for transmission to the network management system of the accessing telecommunication network and converting messages (Smith et al, Pg3, [0039]) from the network management system of the accessing telecommunication for use by the network management system of the second dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the transmission and converting of messages in the network.

Nonetheless, Smith et al discloses the transmission and converting of messages in the network (Smith et al, Pg3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art the time of the invention was made to allow the use of transmitting and converting of

Art Unit: 2143

messages, taught by Smith et al, for the purpose of integrating the message feature to the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between nodes/systems about resource management of layer 1 devices.

Consider Claim 3, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of claim 1, wherein: the dedicated network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and the accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the use of converting network XML messaging.

Nonetheless, Smith et al clearly discloses the communication of network information into XML messages (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into XML, taught by Smith et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 4, Ciscon et al, as modified by Smith et al discloses the carrier

Art Unit: 2143

virtual network interface of claim 2, wherein:

the dedicated network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) converts network information to XML messages (Smith et al, Pg3, [0039]); the second dedicated network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) converts network information to XML messages (Smith et al, Pg3, [0039]); and the accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) converts network instructions to XML messages (Smith et al, Pg3, [0039]).

Ciscon et al, as modified by Smith et al fails to disclose the use of converting network information into XML messaging.

Nonetheless, Smith et al clearly discloses the use of converting network information into XML messaging (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into XML, taught by Smith et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 9, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of claim 1, wherein the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Art Unit: 2143

Ciscon et al, as modified by Smith et al fails to disclose the use of JMS protocol for messaging.

Nonetheless, Smith et al clearly discloses the communication of network information into messages transmitted via JMS protocol (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into JMS protocol, taught by Smith et al, for the purpose of integrating the use of JMS protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 10, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of claim 2, wherein the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the use of JMS protocol for messaging.

Nonetheless, Smith et al clearly discloses the communication of network information into messages transmitted via JMS protocol (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into JMS protocol, taught by Smith et al, for the purpose of integrating the use of JMS protocol to send the messages into the network interface device/network

**Art Unit: 2143** 

management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 13, Ciscon et al discloses the carrier virtual network interface system to allow an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) managed by a network management system to indirectly manage the layer one resources dedicated to a carrier virtual network, the layer one resources dedicated to the carrier virtual network being directly managed by the network management system of each of at least one dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) the interface system comprising: a dedicating network business layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the dedicating network business layer transmitting signals between the network management system of the dedicating telecommunication network and the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the signals transmitted over the dedicating network business layer permitting the network management system of the dedicating telecommunication network, to directly manage the layer one resources of the dedicating telecommunication network (Ciscon et al. Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

An accessing network business layer, the accessing network business layer transmitting signals between the network management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2,

Art Unit: 2143

[0014]), and the layer one resources of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the signals transmitted over the accessing network business layer permitting, the network management system of the accessing telecommunication network to directly manage the layer one resources of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

A dedicating network interpretation layer, the dedicating network interpretation layer converting signals received from the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) having a predetermined format to signals for transmission to the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0013], Pg 2, [0014]) dedicated to the carrier virtual network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

An accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) converting network instructions from the network management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) intended for the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

And a communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the communication layer transmitting messages (Smith et al, Pg3,

Art Unit: 2143

[0039]) having a predetermined format between the dedicating network interpretation layer and the accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), whereby the network management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) indirectly manages the layer-one, resources, of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) dedicated to the carrier virtual network by the network management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) issuing network-instructions intended for the layer one resources of the dedicating, telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0038], Pg 3, [0041], Pg 3, [0041], Pg 3, [0041], Pg 3, [0038], Pg 3, [0041], Pg 3, [0041], Pg 3, [0038], Pg 3, [0041], Pg 3, [0041]).

The communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) from the accessing network interpretation (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) layer to the dedicating network translation layer;

The dedicating network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) converting the messages (Smith et al, Pg3, [0039]) received from the communication layer to network instructions for transmission over the dedicating network business layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the accessing network interpretation layer directing the network instructions to the layer one resources of telecommunication network (Ciscon et al, Pg

Art Unit: 2143

3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) dedicated to the carrier virtual;

The layer one resources of the dedicating telecommunication network transmitting network information over the dedicating network business layer to the dedicating network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); and being directed to the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

The communication layer transmitting messages from the dedicating network interpretation layer to the accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

The accessing network interpretation layer received from the communication layer to network information (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the accessing network interpretation layer directing the network information to the management system of the accessing telecommunication network; and

The management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) receives network information regarding the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) dedicated to the carrier virtual network from the accessing network translation layer.

Ciscon et al fails to disclose the transmission and converting of messages in the network from the network layers.

Nonetheless, Smith et al discloses the transmission and converting of messages in the network from the network layers (Smith et al, Pg3, [0039]).

Application/Control Hami

Art Unit: 2143

Therefore it would have been obvious to a person of ordinary skill in the art art the time of the invention was made to allow the use of transmitting and converting of messages, taught by Smith et al, for the purpose of integrating the message feature to the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between nodes/systems about resource management of layer 1 devices.

Consider Claim 14, Ciscon et al discloses the method for interfacing the management of layer one telecommunication resources in a carrier virtual network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), wherein the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) may indirectly manage layer one resources dedicated to the carrier virtual network by at least one dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) having a dedicating telecommunication network management system, the method comprising:

converting network information regarding layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); transmitted to the management system of the accessing telecommunication network to a format useable by the accessing, telecommunication network management system (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]);

Art Unit: 2143

on control reamber. Ton 21,0

issuing network instructions for the layer one resources of the dedicating telecommunication network, dedicated to the carrier Virtual network from the network management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); transmitted to the management system of the dedicating telecommunication network instructions to a format useable by the dedicating telecommunication network management system (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); and transmitting the network instructions to the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) dedicated to the carrier virtual network to those layer one resources.

Ciscon et al fails to disclose the transmission and converting of messages in the network layers.

Nonetheless, Smith et al discloses the transmission and converting of messages in the network layers (Smith et al, Pg3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art art the time of the invention was made to allow the use of transmitting and converting of messages, taught by Smith et al, for the purpose of integrating the message feature to the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between nodes/systems about resource management of layer 1 devices.

Art Unit: 2143

Consider **Claim 15**, Ciscon et al, in view of Smith et al discloses the method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of **claim 14**.

Ciscon et al, as modified by Smith et al fails to disclose the use of XML messaging.

Nonetheless, Smith et al clearly discloses the communication of network information into XML messages (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into XML, taught by Smith et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 17, Ciscon et al, as modified by Smith et al discloses the method for interfacing, the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 15, wherein the steps of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of an accessing telecommunication network and of transmitting, messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3,

Art Unit: 2143

[0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) comprises transmitting messages using a JMS protocol (Smith et al, Pg3, [0039]).

Ciscon et al fails to disclose the use of JMS protocol for communication of network information into messages in the network.

Nonetheless, Smith et al clearly discloses the communication of network information into messages transmitted via JMS protocol (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into JMS protocol, taught by Smith et al, for the purpose of integrating the use of JMS protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 23, Ciscon et al discloses that at least one machine readable media containing machine readable code embodied thereon for causing a carrier virtual network system to perform a method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) in a carrier virtual network, wherein the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) may indirectly manage layer one resources dedicated to the carrier virtual network by at least one dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) having a dedicating telecommunication

Art Unit: 2143

network management system (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), the method comprising:

converting network information regarding layer one resources of the-dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) to the management system of the accessing telecommunication network to a format useable by the accessing telecommunication network management system (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); issuing network instructions for the layer one resources of the dedicating telecommunication network dedicated to the carrier virtual network from the network management system of the accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); to the management system of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) to network instructions to a format useable by the dedicating telecommunication network management system; and transmitting the network instructions to the layer one resources of the dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) dedicated to the carrier virtual network to those layer one resources.

Ciscon et al fails to disclose the transmission and converting of messages in the network layers.

Art Unit: 2143

Nonetheless, Smith et al discloses the transmission and converting of messages in the network layers (Smith et al, Pg3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art art the time of the invention was made to allow the use of transmitting and converting of messages, taught by Smith et al, for the purpose of integrating the message feature to the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between nodes/systems about resource management of layer 1 devices.

Consider Claim 24, Ciscon et al, as modified by Smith et al fails to disclose clearly discloses that at least one machine readable media of claim 23, wherein the predetermined format of messages is XML

Nonetheless, Smith et al clearly discloses the predetermined format of the messages is XML (Smith et al, Pg 3, [0039]).

Ciscon et al, in view of Smith et al clearly discloses that at least one machine readable media of claim 23, wherein the predetermined format of messages is XML (Smith et al, Pg 3, [0039])

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into XML, taught by Smith et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the

Art Unit: 2143

invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 26, Ciscon et al, as modified by Smith et al discloses the at least one machine readable media: of claim 24, an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of a dedicating messages using a JMS protocol (Smith et al, Pg3, [0039]).

Ciscon et al, fails to disclose the use of JMS protocol for messaging format to the management system.

Nonetheless, Smith et al clearly discloses the use of JMS protocol for messaging format to the management system. (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into JMS protocol, taught by Smith et al, for the purpose of integrating the use of JMS protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, for the purpose of facilitating communication between notes/systems in the networks.

Art Unit: 2143

Claims 5, 6, 11-12, 18-19, 21-22, 27, 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/004827), in view of Smith et al (US Pub 2004/0181476), in further view of Randle et al (US Pub 2006/0248205).

Consider **Claim 5**, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of **claim 1**, wherein: the dedicated network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]); and the accessing network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the use of conversion of network information into ASCII text messages.

Nonetheless, Randle et al, discloses the use of conversion of network information into ASCII text messages (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into ASCII text, taught by Randle et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 6, Ciscon et al, as modified by Smith et al discloses the carrier

Art Unit: 2143

virtual network interface of claim 2, wherein:

the dedicated network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) the second dedicated network interpretation layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the use of conversion of network information into ASCII text messages.

Nonetheless, Randle et al, discloses the use of conversion of network information into ASCII text messages (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into ASCII text, taught by Randle et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 11, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of claim 1, wherein the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the use of telnet protocol for messaging.

Nonetheless, Randle et al clearly discloses the communication of network information into messages transmitted via Telnet protocol (Randle et al, Pg 8, [0087]).

Art Unit: 2143

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into using Telnet protocol, taught by Randle et al, for the purpose of integrating the use of Telnet protocol to send the messages into network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 12, Ciscon et al, as modified by Smith et al discloses the carrier virtual network interface of claim 2, wherein the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]).

Ciscon et al, as modified by Smith et al fails to disclose the use of telnet protocol for messaging.

Nonetheless, Randle et al clearly discloses the communication of network information into messages transmitted via Telnet protocol (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into using Telnet protocol, taught by Randle et al, for the purpose of integrating the use of Telnet protocol to send the messages into network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Art Unit: 2143

Consider Claim 18, Ciscon et al, as modified by Smith et al discloses the method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 15, wherein the steps of transmitting messages having a predetermined format to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014])

Ciscon et al, as modified by Smith et al fails to disclose the use of telnet protocol for messaging.

Nonetheless, Randle et al clearly discloses the communication of network information into messages transmitted via Telnet protocol (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into using Telnet protocol, taught by Randle et al, for the purpose of integrating the use of Telnet protocol to send the messages into network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 19, Ciscon et al, in view of Smith et al discloses the method for

Art Unit: 2143

interfacing the management of layer-one telecommunication resources (Ciscon et al, Pg 3. [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 14.

Ciscon et al, as modified by Smith et al fails to disclose the use of ASCII text messages format.

Nonetheless, Randle et al, discloses the use of ASCII text messages format (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into ASCII text, taught by Randle et al, for the purpose of integrating the ASCII message feature to network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 21, Ciscon et al, in view of Smith et al, and Randle et al discloses the method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 19, wherein the steps of transmitting messages having a predetermined format to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) comprises transmitting messages (Smith et al, Pg3, [0039]).

Art Unit: 2143

Ciscon et al, as modified by Smith et al and Randle et al fails to disclose the use of JMS protocol for messaging.

Nonetheless, Smith et al clearly discloses the communication of network information into messages transmitted via JMS protocol (Smith et al, Pg 3, [0039]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into JMS protocol, taught by Smith et al, for the purpose of integrating the use of JMS protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, in view of Randle et al for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 22, Ciscon et al, in view of Smith et al discloses the method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 19, wherein the steps of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]), comprises transmitting messages (Smith et al, Pg3, [0039]).

Ciscon et al, as modified by Smith et al fails to disclose the use of telnet protocol for messaging.

Nonetheless, Randle et al clearly discloses the communication of network information into messages transmitted via Telnet protocol (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into using Telnet protocol, taught by Randle et al, for the purpose of integrating the use of Telnet protocol to send the messages into network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 27, Ciscon et al discloses, in view of Smith et al the at least one machine readable media of claim 24, wherein the steps of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management, system of a dedicating telecommunication messages.

Ciscon et al, as modified by Smith et al fails to disclose the use of telnet protocol for messaging.

Nonetheless, Randle et al clearly discloses the communication of network information into messages transmitted via Telnet protocol (Randle et al, Pg 8, [0087]).

Art Unit: 2143

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into using Telnet protocol, taught by Randle et al, for the purpose of integrating the use of Telnet protocol to send the messages into network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 28, Ciscon et al, in view of Smith et al discloses that at least one machine readable media of claim 23, wherein the predetermined format of messages (Smith et al, Pg3, [0039]).

Ciscon et al, as modified by Smith et al fails to disclose the use of ASCII text format messages.

Nonetheless, Randle et al, discloses the use of ASCII text format messages (Randle et al, Pg 8, [0087]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into ASCII text, taught by Randle et al, for the purpose of integrating the XML message feature to network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Art Unit: 2143

Claims 7-8, 16, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/004827), in view of Smith et al (US Pub 2004/0181476), in further view of Battou (US Pub 2002/0174207).

Consider Claim 7, Ciscon et al, as modified by Smith et al clearly discloses the carrier virtual network interface of claim 1, wherein the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) transmits messages.

Ciscon et al, as modified by Smith et al fails to disclose the use of CORBA protocol for messaging.

Nonetheless, Battou clearly discloses the communication of network information into messages transmitted via CORBA protocol (Battou, Pg 18, [0276]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into CORBA protocol, taught by Battou, for the purpose of integrating the use of CORBA protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks

Consider Claim 8, Ciscon et al, as modified by Smith et al, discloses the carrier virtual network interface of claim 2, wherein the communication layer (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014])

Art Unit: 2143

Ciscon et al, as modified by Smith et al fails to disclose the use of CORBA protocol for messaging.

Nonetheless, Battou clearly discloses the communication of network information into messages transmitted via CORBA protocol (Battou, Pg 18, [0276]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into CORBA protocol, taught by Battou, for the purpose of integrating the use of CORBA protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Consider Claim 16, Ciscon et al, as modified by Smith et al discloses the method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 15, wherein the steps of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) comprises transmitting messages using a CORBA protocol (Battou, Pg 18, [0276]).

Art Unit: 2143

Ciscon et al, as modified by Smith et al fails to disclose the use of CORBA protocol for messaging.

Nonetheless, Battou clearly discloses the communication of network information into messages transmitted via CORBA protocol (Battou, Pg 18, [0276]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into CORBA protocol, taught by Battou, for the purpose of integrating the use of CORBA protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks

Consider Claim 25, Ciscon et al, in view of Smith et al discloses the at least one machine readable media of claim 24, wherein the steps of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of an accessing a telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the, management system of a dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) comprises transmitting messages (Smith et al, Pg3, [0039]).

Ciscon et al, as modified by Smith et al fails to disclose the use of CORBA protocol for messaging.

Art Unit: 2143

Nonetheless, Battou clearly discloses the communication of network information into messages transmitted via CORBA protocol (Battou, Pg 18, [0276]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into CORBA protocol, taught by Battou, for the purpose of integrating the use of CORBA protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, for the purpose of facilitating communication between notes/systems in the networks.

Claims 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ciscon et al (US Pub 2002/0004827), in view of Smith et al (US Pub 2004/0181476), and Randle et al (US Pub 2006/0248205) in further view of Battou (US Pub 2002/0174207).

Consider Claim 20, Ciscon et al; as modified of Smith et al and Randle et al discloses the method for interfacing the management of layer one telecommunication resources (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) of claim 19, wherein the steps of transmitting messages (Smith et al, Pg3, [0039]) having a predetermined format to the management system of an accessing telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) and of transmitting messages having a predetermined format to the management system of a

Page 34

Application/Control Number: 10/721,372

Art Unit: 2143

dedicating telecommunication network (Ciscon et al, Pg 3, [0038], Pg 3, [0041], Pg 3, [0013], Pg 2, [0014]) comprises transmitting messages (Smith et al, Pg3, [0039])

Ciscon et al, as modified by Smith et al, and Randle et al fails to disclose the use of CORBA protocol for messaging.

Nonetheless, Battou clearly discloses the communication of network information into messages transmitted via CORBA protocol (Battou, Pg 18, [0276]).

Therefore it would have been obvious to a person of ordinary skill in the art at the time of the invention was made to allow the use of transmitting and converting of messages into CORBA protocol, taught by Battou, for the purpose of integrating the use of CORBA protocol to send the messages into the network interface device/network management system, in the invention taught by Ciscon et al, in view of Smith et al, and Randle et al for the purpose of facilitating communication between notes/systems in the networks.

Art Unit: 2143

## Response to Arguments

Applicant's arguments filed 11/9/07 have been fully considered but they are not persuasive.

The claimed invention of claim 1, includes dedicating network interpretation layer converting network information to messages for transmission to the network management system of the accessing telecommunication network. Applicant argues that Ciscon fails to prepare messages for transmission to another telecommunication network, and Ciscon fails in converting network information to messages for transmission to the network management system of the accessing telecommunication network.

The examiner states that Ciscon does show on the network management system accesses the telecommunication system along with the reference of Smith et al, it clearly shows on how information can be converted to different types of messages (or formats) for different types of network. Ciscon shows on how the network(s) is accessed in (Ciscon [0038]-[0042]). And Smith shows on how messages are converted into different formats (Smith et al, [0039]). Combination of Ciscon and Smith et al does make it obvious to a person skilled in the art on how the networks are accessed, along with transmission of network messages.

The claimed invention of claim 13-14, 23, Applicant argues that Ciscon does not disclose the network management system of accessing telecommunication network

Application/Control Number: 10/721,372 Page 36

Art Unit: 2143

indirectly managing the layer one resources of a dedicating telecommunication network dedicated to the carrier virtual network. Ciscon clearly shows on how networks (within and external) are managed, especially by communicating to the networks from within the layer 1 resources (Ciscon, [0038]-[0041], [0047]). The layer 1 resources are clearly seen in Ciscon [0038]-[0041]. And Smith shows on how messages are converted into different formats (Smith et al, [0039]). Combination of Ciscon and Smith et al does make it obvious to a person skilled in the art on how the networks are accessed, along with transmission of network messages.

Application/Control Number: 10/721,372 Page 37

Art Unit: 2143

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anish Sikri whose telephone number is 571-270-1783.

The examiner can normally be reached on 8am - 5pm Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on 571-272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/721,372 Page 38

Art Unit: 2143

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
